AQUABELLA ORGANIC SOLUTION

AquaBella Bio-Enzyme Water Treatment

<http://aquabellaorganics.com/aquabella.asp>

AquaBella Organic Solution is a revolutionary and cost-effective breakthrough treatment that naturally cleans water in aquariums, fishponds and wastewater systems. Its unique combination of microorganisms activates and accelerates a natural cleansing process, making fresh and saltwater environments cleaner and healthier for fish. AquaBella's formula of microorganisms also treats sludge, breaks up pollutants, restores and maintains healthy pH levels, and reduces odors in wastewater making it, when used with filtration in wastewater systems, suitable for subsurface irrigation and other beneficial uses.

AquaBella Organic Solution:

- Regulates and maintains healthy pH levels
- Reduces environmental stress
- Dramatically increases yield in fish and shrimp farms
- Clarifies irrigation ponds
- Treats sludge
- Reduces odors in wastewater

AquaBella Organic Solution's dynamic blend of 100% naturally occurring organic microorganisms:

- Breaks down ammonia and nitrates
- Reduces phosphates
- Prevents algal bloom
- Minimizes the use of chlorine in water storage units thereby reducing carcinogenic trihalomethanes

AquaBella Organic Solution is:

- A unique and easy to apply 100% natural water treatment to clarify both fresh and salt water.
- A cost-effective organic treatment that breaks down pollutants, reduces odors and prevents algae blooms with a unique combination of more than 20 non-pathogenic microorganisms that are found in non-contaminated clean waters.
 - This precise blend of microorganisms accelerates and optimizes the decomposition of water pollutants.
 - Introduced at levels that will ensure significant improvement in the shortest time, these beneficial bacteria reduce high levels of nitrite, nitrate, ammonia and phosphates that cause pollution far beyond any other treatment capabilities.
- An all-in-one treatment that uses natural bacteria to cycle nitrogen and other nutrients that are vital to a healthy water ecosystem for optimal plant and animal growth.
- A breakthrough in reducing turbidity by reducing phosphates to levels suppressing algae growth, while still able to support plant growth. AquaBella incorporates both aerobic and anaerobic bacteria to guarantee the breakdown of phosphorous, ammonia, nitrates and nitrites and other nutrients.
- A unique complex blend of naturally occurring microbes that break down the sludge that accumulates on the bottom of ponds creating unhealthy anaerobic conditions. AquaBella works to restore and maintain healthy pH levels that contribute to the health of fish and makes them more resistant to disease.
- While other products strip both bad and good bacteria from water AquaBella's formula preserves the good bacteria that is found in healthy water.
