FRONT

Guarantee

Aquabella Organic Solutions guarantees the following: If the Aquabella Bio-Enzyme water treatment system is implemented as instructed on the packaging and if a water change is necessary in your aquarium before one year from the date of the initial application, the product will be replaced. Please send proof of purchase to the address for Aquabella Organic Solutions below and a replacement system will be sent free, one package per household address. Please be careful:

- The guarantee assumes proper feeding and normal light conditions in your aquarium.
- The guarantee may be invalid if other additives are added to your salt water

Aquabella stabilizes pH levels, which reduces the stress on your fish. The treatment process incorporates both aerobic and anaerobic bacteria to breakdown ammonia, nitrates and nitrites improving water quality and reducing odors.

INSIDE

Direction for use

AquaBella Organic Solutions has designed a unique treatment system to facilitate ease of application. The same procedure for treatment is followed whether you have a five (5) or one hundred and twenty five (125) gallon aquarium. Six (6) syringes are conveniently included in the package. Each syringe is clearly labeled to ensure treatment at the correct application rate. **NO MIXING, NO MEASURING, NO MESS.** It is recommended that you begin the treatment **WITHOUT** changing the **SALT** water in your aquarium.

Beginning **DAY 1** – use syringe labeled “**DAY 1**”, repeat application of product to your aquarium each day for the next **4** Consecutive days. On the **90th** day after the first application, apply the last remaining syringe labeled “**Day 90**”. This last treatment reinforces the stability of a balanced aquatic eco-system.

There is **NO** need to stir AquaBella into your salt water aquarium, the product **WILL DISSOLVE ON ITS OWN.** From **Day 1** to **Day 5** each day, plunge the daily pre-measure amount in the barrel of the syringe into your aquarium. By the end of the **5** day treatment, you will see improvements in pH stability and water quality, which will reduce stress on fish in an aquatic ecosystem.

AquaBella stabilizes pH levels, which reduces the stress on your fish. The treatment process incorporates both aerobic and anaerobic bacteria to breakdown ammonia, nitrates and nitrites improving water quality and reducing odors.
