

Vineyard of
PASTERICK

October 14, 2009

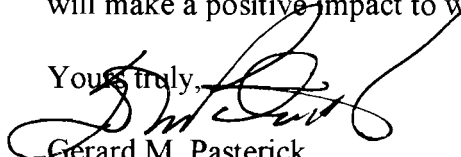

To whom it may concern:

We applied TerraBella, AquaBella Organic Solution's innovative microbial product to one-half of a two acre block (A Block) of our Syrah Vineyard. One application was made in the fall of 2008 and a second application in the spring of 2009. A Block has the same clone on the same rootstock throughout. The vine spacing, trellis system, aspect and soil conditions are the same. The treated acre had a darker, larger and healthier leaf structure during the growing season than the non-treated acre.

We picked the treated acre portion and eight adjacent rows of the untreated portion on September 16th. We did not obtain an exact yield comparison by weight, however, based on picking rates and estimated weight, it appeared that the treated acre yielded about 10% more fruit than the untreated acre.

In my opinion, the AquaBella Organic Solution had a positive impact on the treated acre. We intend to treat the entire block this year. I believe the AquaBella Organic Solution will make a positive impact to winegrowing in California

Yours truly,

Gerard M. Pasterick
Co-Owner
