I have been involved with hog farming for 21 years, over the years my Hog Pit continually builds up with 2-3 feet of sludge. Because of the thickness, I could not pump the Pit out, my pumps and filters would get plugged.

In February, 2009, I treated the hog sludge with your NEW product, AquaBella; 4 weeks after the initial application, the sludge broke down and I was able to pump two-thirds without plugging my filters. After the pumping, I applied AquaBella again, 2 weeks later; I was able to completely pump out the pit.

Since then, I have been applying AquaBella monthly preventing sludge build up totally.

This is a breakthrough product that I would recommend to all hog farming operators.

The ability to break-up sludge and prevent build-up is very beneficial and cost effective.
